High-Concept Statement

Dungeon Run is a captivating single-player RPG that plunges you into the depths of the Trigonal Abyss, a mystical dungeon forged by the legendary wizard Pascala. 500 years ago, Pascala created the Tetra Head, a powerful prism capable of reshaping reality. After his death, the dungeon was sealed and filled with strange, otherworldly creatures to protect the artefact. It is said that the final guardian, the fearsome Three-Headed Hydra, has never been defeated.

Adventurer, do you have the courage and resolve to conquer the dungeon and claim the Tetra Head's reality-altering power?

Core Mechanic: Explore the dungeon, defeat enemies, collect loot, upgrade the deck, get to the boss

Game Design Element

Narrative: The narrative weaves the game's lore through its core elements, including the ruleset, dungeon tiles, and enemies encountered. The backstory is succinctly presented on a single sheet, outlining the history of the dungeon, the protagonist, and the antagonist's objective. This design supports the game's combat and exploration mechanics, reinforcing its "quirky dungeon crawler" theme, ensuring that each playthrough feels unique and non-linear. Additionally, cryptic messages hidden within certain tiles invite players to delve deeper into the lore, fostering a community-driven expansion of the game's story.

Combat: Card-based combat system built on the idea of controlled randomness. Enemies have different movesets simulated by 7 card system. 7 card system provides an enemy with balanced moveset of 6 actions + 1 action card that is randomly taken from the 7th card deck. Thanks to this, the enemies can have unique movesets and be balanced enough, but still provide enough randomness, so every encounter is a little bit different. In every encounter there can be 1 to 3 enemies, which can be either basic or elite. The difficulty of encounters is decided by the phase of the game. There are 3 phases, that change while playing the game and in every phase the encounters become more difficult. Player has a deck of cards to use. These cards can be upgraded in the special "forge" room, but the number of cards in the player deck is always the same. Number of cards in the player's hand is 5. In every turn, player uses 2 cards to fight the monsters. And all monsters use 1 action in the same turn. After that, the player draws 2 cards. This continues until all the enemies, or the player are defeated. When the enemies are defeated player gets the loot and continues to the exploration stage. If the player is defeated the games ends and the player lose.

Exploration: In this board game, the player starts by creating a random dungeon by laying out face-down triangular tiles that represent the different rooms. These tiles have specific functions: some contain battles, others allow the player to upgrade his deck, heal, increase his maximum health, or even reveal more tiles. At the beginning of the game, the player is given 3 coins. Once the board is set up, the player chooses 2 tiles to reveal and then chooses 1 to go there as their starting tile. On each turn, 2 tiles are revealed, and the player chooses where to go among the revealed tiles. However, the "observation" tiles allow the player to see the 3 adjacent tiles. From there, the player must fight the enemies found in the revealed tiles and gain the corresponding benefits. This can include earning money to upgrade the deck, upgrading the deck with the earned money, healing, etc. The cycle repeats until the dungeon is complete.

The Objectives

Main: Complete the game by defeating the boss.

Narrative: Narrative elements are encrypted within the tiles for the player to make guesses of the game's true lore.

The Competition

The core game elements are inspired by other RPG board games, which are most often big and complicated. These games can take multiple hours for 1 play session and a longer time to get into. These games are most often multiplayer. Our game brings a simple gameplay loop with less game mechanics which are easy to understand, but also an ever-changing experience, which provides a lot of possibilities for the player. Our game is a solo experience with a shorter play time for 1 play session. In the end, our game brings a quite unique twist on the bigger RPG board games that are available, which can give it a good place on the market.

Compelling aspects

1. Unique solo experience: The game is designed exclusively for a single player, filling a rarely explored niche in traditional board games.
2. Dynamic and ever-changing dungeon: Each playthrough offers a completely different board thanks to the random arrangement of triangular tiles, adding infinite replayability.
3. Innovative enemy system: Enemies feature a semi-random attack pattern based on a unique deck that blends pre-defined moves with an element of randomness. This creates enemies with learnable patterns, maintaining a balance between challenge and predictability.
4. Distinctive triangular board: The use of triangular tiles instead of the traditional square or hexagonal ones stands out visually and adds a unique strategic component.
5. Fully card-based gameplay: All game mechanics, from player actions to enemy attacks, are controlled by cards, delivering a cohesive and engaging tactical experience.
6. Challenging progression: Three levels of increasing difficulty culminate in an epic final boss battle, providing a clear sense of progress and reward.
7. Diverse enemies: With different enemy types (normal and elite) and specialized subtypes such as "Healer," "Tank," or "Attack," the game offers strategic and tactical variety.
8. High replayability: The combination of ever-changing dungeons, enemies with unique patterns, and the ability to upgrade the player's deck ensures that each game feels fresh and exciting.
