

DUNGEON RUN

TRIALS OF PASCALA

CREATED BY ABHISHTA GATYA ADYATMA, IGNACIO MOLINA AND MATÚŠ NAGY

The Call to the Trigonal Abyss: A Challenge for the Brave

To the Adventurers of the Realm,

The Kingdom of Telas calls upon the boldest, the strongest, and the most daring among you. A great challenge awaits—one that will test your courage, your skill, and your resolve. The fate of the realm hangs in the balance, and only the greatest warrior can rise to this task.

Deep within the cursed lands of the *Trigonal Abyss* lies an artefact of unimaginable power: the *Tetra Head*. Crafted by the mad wizard *Pascala*, this machine was designed to harness the chaotic magic of *Matika*, a force that bends reality itself. But *Pascala*'s creation was not a gift to the world—it was a curse. The *Tetra Head* has unleashed chaos upon the land, twisting the very fabric of the Abyss into a nightmare of unstable energy, shifting terrain, and monstrous creatures born of pure destruction.

At the heart of the Abyss, the *Tetra Head* remains, guarded by a fearsome *three-headed hydra*, a beast of unparalleled strength and ferocity. This creature is no ordinary foe; it is a manifestation of the chaos that *Matika* embodies, a living testament to *Pascala*'s reckless ambition.

The Kingdom of Telas cannot allow this threat to persist. The *Tetra Head* must be retrieved and brought to the capital, where its power can be contained and studied. But this is no ordinary quest. The *Trigonal Abyss* is a place of despair, where the air crackles with unstable energy, the ground shifts beneath your feet, and the shadows themselves seem alive. Those who enter rarely return, and those who do are forever changed.

This is a challenge for the greatest warrior among you. Do you have the strength to face the hydra? The courage to brave the horrors of the Abyss? The will to confront the chaos that *Pascala* unleashed upon the world?

To the one who succeeds, great rewards await. The Kingdom will honor you as a hero, your name will be etched into history, and your deeds will be sung by bards for

generations to come. But more than glory, you will have the satisfaction of knowing that you have saved the realm from a threat that could have brought about its end.

The Challenge:

- Venture into the *Trigonal Abyss*, a land of chaos and despair.
- Defeat the *three-headed hydra*, guardian of the Tetra Head.
- Retrieve the *Tetra Head* and bring it to the *capital of Telas*.

The Reward:

- Eternal glory and recognition as the realm's greatest warrior.
- A place of honor in the Kingdom's history.
- Riches beyond measure, granted by the Crown itself.

This is not a task for the faint of heart. It is a challenge for those who dare to face the unknown, who thrive in the face of danger, and who seek to prove themselves as the greatest warrior of their age.

Will you answer the call? Will you rise to the challenge and secure your place in history?

The *Kingdom of Telas* awaits its champion.

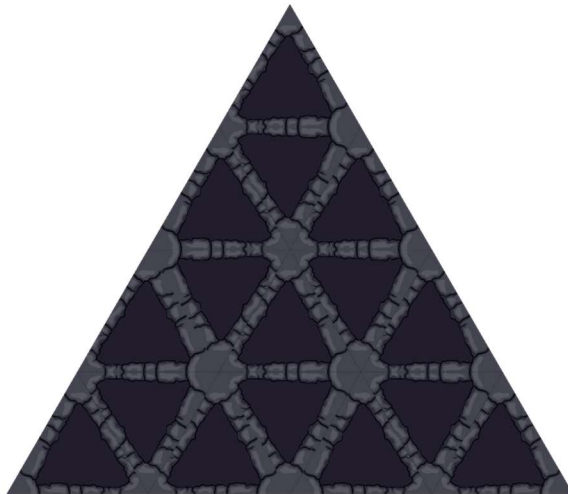

Signed,

Elron of Telas

Scholar and Advisor to the Crown

Setup

1. Prepare game board in the shape of triangle made of 4 smaller triangles, combat board and Player HP bar. All with its tokens (Player and Monster HP tokens + Dungeon tile tokens).

- 2) Shuffle all decks. Prepare 3rd card decks, 3 Encounter decks, 3 Monster attack decks, Basic and Elite monster decks, Dungeon tiles deck, Player deck and Forge deck.

3) Player takes 5 cards from Player deck to the hand.

4) Game setup example.

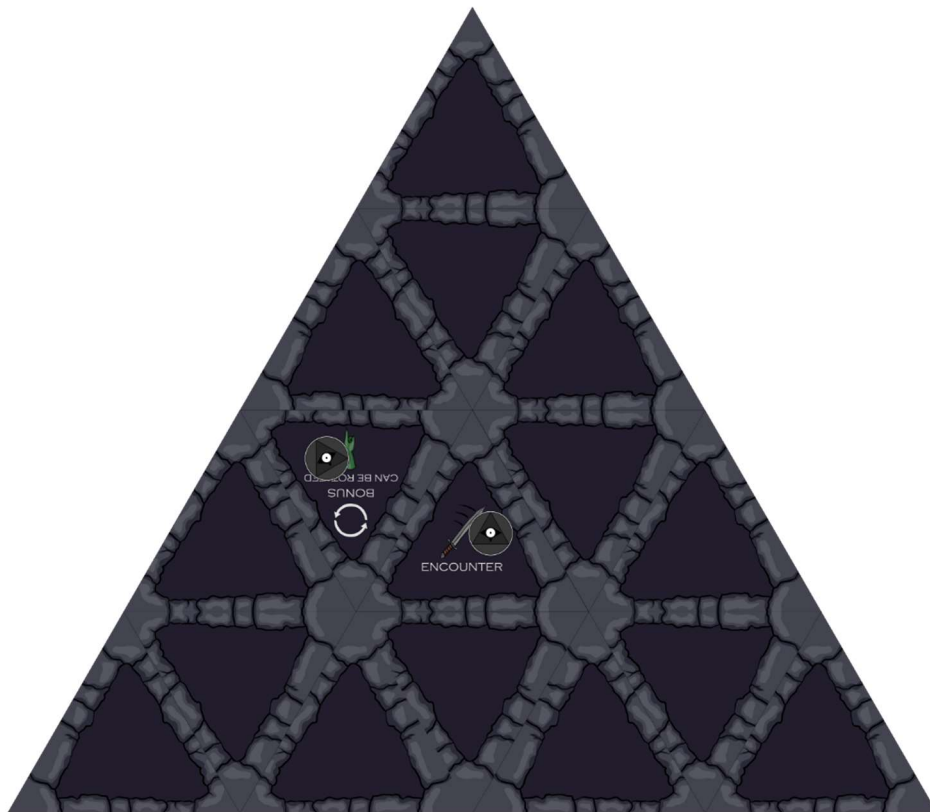

Hint: Forge deck can be put face-up creating multiple little decks with different types of cards, when there is enough room. This provides better experience of upgrading cards as the player can see all possibilities next to each other.

Exploration

Exploration is a part of a game, where player interacts with the dungeon tiles and layout.

- 1) Start with placing all dungeon tiles on the game board face-down.
- 2) Then, every turn put 2 cards face-up and interact with them as supposed.
- 3) Example of the first turn. All cards are on the board face-down and player put 2 cards face-up. There is an Encounter tile and Bonus tile. Bonus tile can be rotated, so it provides bonus for the encounter. After using the Bonus tile and interacting with Encounter tile, the player put tokens on them.

Player

Player starts with 10 HP. This number can be upgraded to 13HP through exploring. Player has 21 cards in the player deck total, but he always has 5 of these cards in his hand. Player can upgrade up to 9 cards.

Dungeon tiles

There are 16 Dungeon tiles, and every type of dungeon tile has a different effect for the player.

Encounter tile

When you interact with Encounter tile you enter a combat. After defeating an encounter, you can upgrade 1 of your Player cards following rules written in Forge.

Example: Player enters combat, takes an Encounter card and draws respective number and type of enemies and 7th cards for them. After defeating the encounter, player discard Miss card from his deck permanently and takes a Defence card instead. Player always has 21 cards in his deck.

Armory tile

Player gets + 1 max HP, when the player is not fully healed, he is also healed by 1 HP.

Example: Player has 10 max HP at the start and he did not interact with any Armory yet, but he was damaged in recent encounter, so he has 8 HP now. By interacting with Armory tile, he has his max HP raised by 1 and he is healed by 1. So he now has 11 max HP and 9 current HP.

Teleport tile

You can switch Teleport tile with any other tile resetting the effect of the tile which is teleported (Not the Teleport tile).

Example: Player encounters a Teleport tile and he wants to use it. He has already used Bonus tile on his board. Player switches teleport tile with this used Bonus tile, so the Bonus tile can be used again. Player takes off token from the used bonus tile refreshing it's effect and put the token on the teleport. The teleport cannot be used again.

Bonus tile

Bonus tile provides benefit for the player in combat. When the bonus is used, every 7th card in an encounter is counted as Miss card. Bonus points towards

one direction, and if there is an Encounter tile, the player can use the effect of the Bonus tile in that encounter. Bonus tile can be rotated.

Example: Player has a Bonus tile next to an Encounter tile, but the Bonus points towards wrong direction. Player rotates the Bonus tile, so it points towards the Encounter tile and uses it's effect. Thanks to this, all 7th cards in this encounter will be counted as Miss cards. But the miss cards will be drawn anyway. Player has 2 enemies in the encounter, so he draws 2 7th cards for them. Player draws Piercing attack card and Miss card. Both of these cards counts as Miss cards when enemy use them. Player puts a token on the Bonus tile when he use it.

Observatory tile

Observatory tile reveals 3 adjacent tiles when encountered.

Example: Player encounter Observatory tile, when 1 adjacent tile was already put face-up. Player puts 2 remaining adjacent tiles face-up and puts a token on the Observatory tile.

Forge

When player defeats an encounter, he can upgrade 1 of his cards following the ruleset. When upgrading, player has to discard the card which he wants to upgrade permanently. Then he takes a card from the Forge deck instead of discarded card. Player has always 21 cards in his deck.

How to upgrade cards

Miss -> Attack/Defence/Dodge/Charge/Heal self

Attack -> Piercing attack/combo

Combo -> Combo +

Defence -> Defence 2

Defence 2 -> Defence 3

Heal self -> Heal self 2

Heal self 2 -> Heal self 3

Dodge -> Dodge 2/Counterattack

Dodge 2 -> Dodge 3

Combat

Start of combat

Player enters combat when interacting with Encounter tile. There are 9 Encounter tiles and 3 different difficulty levels of encounters.

Every encounter, the player draws 1 card from respective Encounter deck and then draws Monster cards based on instructions on the drawn card. Player also draws respective 7th cards for every monster.

First 3 encounters the player draws cards from Basic encounter deck and Basic 7th card deck.

Next 3 encounters the player draws cards from Intermediate encounter deck and Intermediate 7th card deck.

Last 3 encounters the player draws cards from Endgame encounter deck and Endgame 7th card deck.

Fight

Each turn, player uses 2 cards from his hand. Then, he put all Monster attack cards of all enemies face-up. Player can see what happened in this turn by looking on the Enemy card, where he can see what the number on the Monster attack card means. When the player modify Health counters based on the outcome of the turn, the turn ends.

Next turn, the player draws 2 cards from the Player deck.

Monster moves

Every monster has different moves written on their card. Next to the move is a number, that tells the player what move the monster does, when that number is drawn from Monster attack deck.

7th card system

Every monster has a 7th attack, which is always different. Player draws this attack from respective 7th card deck (basic 7th card for basic encounter). Player assign the 7th cards from left to right so every monster has its 7th attack assigned.

Monster attack card system

Every monster (up to 3 in a single encounter) has its Monster attack deck. Every turn, every monster does 1 action, which means that the player draws 1 card from respective Monster attack decks for all monsters.

This deck IS NOT shuffled until the monster is defeated. When the deck is depleted, the player takes the deck as it is and turns it upside down, so the order of cards stays the same. Thanks to this, every enemy has a distinct moveset, which can be remembered.

When the monster is defeated, the player shuffles its Monster attack deck, so it is different for the next monster.

Player deck

When the Player deck is depleted in encounter. The player shuffles the deck and use it again.

Cards and abilities

Attack card – Deal 1 damage to 1 target. Multiple attacks can be used towards different targets.

Combo card – Attack 2 times. This card counts as 2 separate attacks.

Combo + card – Attack 3 times. This card counts as 3 separate attacks.

Piercing attack card – Deal 1 damage to 1 target, negate defence. This card can be dodged.

Counterattack card – Evade 1 attack and do 1 damage to the target. The user does dodge and attack at the same time.

Life steal card - Do 1 damage and heal 1 HP. The user does attack and heal self at the same time. The user heals even if he does not do damage.

Explosion card – Do 1 damage to all. This attack does 1 damage to all in the room (Player + all enemies)

Defence card – Block 1 damage. Can be negated.

Defence 2 card – Block 2 damage. Can be negated.

Defence 3 card – Block 3 damage. Can be negated.

Miss card – Nothing happened. The user of this card tried to do something, but he failed.

Dodge card – Evade 1 attack. The user negates 1 attack completely.

Dodge 2 card – Evade 2 attacks. The user negates 2 attacks completely.

Dodge 3 card – Evade 3 attacks. The user negates 3 attacks completely.

Heal self card – User heal themselves by 1 HP.

Heal self 2 card – User heal themselves by 2 HP.

Heal self 3 card – User heal themselves by 3 HP.

Charge card – Next turn, the user does 2x damage. Doubling the final number of damage of all attacks used.

Bossfight

Boss has a different combat system from other foes, creating more dangerous encounter and forcing player to change his strategy for the final battle.

Boss always attack with 2 cards but does nothing every 5th turn. He is not using the number 7 in his Monster attack deck (discard it before the fight), but he uses 2 7th cards every 4th turn.

How to fight the boss

At the start, discard number 7 card from his Monster attack deck and draw 2 7th cards from the endgame 7th card deck. These are used every 4th turn.

First 3 turns, the boss uses 2 Monster attack cards each turn.

On the 4th turn, the boss uses 2 7th cards. These are always face-up (same as normal 7th cards).

On the 5th turn, the boss does nothing, so the player can use this opportunity to attack him or heal.

This process repeats until the boss, or the players reaches 0 HP.

Dear Adventurer,

"Reality is for people who lack imagination. Fairy tales are for those who dare to dream."

These are the words of Pascala, the great wizard whose name has been whispered in awe and fear, whose legacy has been twisted into myth and misunderstanding. You have braved the horrors of the Trigonal Abyss, faced the three-headed hydra, and retrieved the Tetra Head. But before you leave this place, I ask you to pause and read these words—not as a scholar, but as someone who once stood where you stand, lost and uncertain, until I too came to understand the truth.

When I first heard of Pascala, I did not see him as a visionary. To me, he was a mystery, a man whose name was synonymous with chaos and destruction. My brother Elron spoke of him with disdain, calling him a madman, a reckless outcast who sought only to unravel the world. I believed those words, for a time. But something about Pascala's story called to me, something I could not ignore.

I ventured into the Trigonal Abyss not as a believer, but as a skeptic. I wanted to see for myself the chaos that Pascala had unleashed, to understand why he had created the Tetra Head and left it here, guarded by monsters and shrouded in mystery. What I found was not what I expected.

The Abyss is not a cursed land, as Elron would have you believe. It is a place of wonder. A place where the air hums with energy, where the ground shifts like a living thing, and where the very fabric of reality seems to bend and twist. It is chaotic, yes, but it is also beautiful. The monsters that roam these lands are not mindless beasts. They are creations, fragments of Pascala's imagination-given form. They are strange and terrifying, but also magnificent in their own way.

As I ventured deeper into the Abyss, I began to see Pascala not as a madman, but as an artist, a poet of magic, a venturer of the unknown. The Tetra Head was not a weapon, as Elron claimed. It is a masterpiece. A machine that sang the song of the universe, harnessing the raw, untamed energy of Matika to reshape the world. But I still did not understand why he had created it. Why he had left it here, in this place of chaos, guarded by the hydra.

And then I faced the hydra.

The three-headed beast was unlike anything I had ever seen. Its scales shimmered with an otherworldly light, its eyes glowed with fierce intelligence, and its roar shook the very ground beneath my feet. I was terrified, but I was also captivated. This was no mindless guardian. This was a sentinel, a protector of Pascala's vision.

As I stood before the hydra, something extraordinary happened. It did not attack. It watched me, its heads tilting in unison, as if waiting for something. And then, in a voice that seemed to echo in my mind, it spoke.

"Why have you come?"

The question startled me. I had expected a battle, not a conversation. But as I stood there, face to face with the hydra, I realized that this was the true test. Not a test of strength, but of understanding.

I told the hydra why I had come. Not to destroy the Tetra Head, as Elron would have wanted, but to understand it. To understand Pascala. And as I spoke, the hydra began to change. Its form dissolved into a swirl of light and shadow, and before me stood the Tetra Head, pulsing with energy.

In that moment, I understood. The hydra was not a monster. It was a manifestation of the chaos that Pascala sought to understand. It was a challenge, yes, but also an invitation. An invitation to prove that I was worthy of understanding the magic that lay at the heart of the Abyss.

Pascala did not create the Tetra Head to destroy the world. He created it to inspire. To challenge us to see beyond the limits of reality, to embrace the chaos within ourselves and find the courage to dream. He believed that Matika was not a force to be feared, but a force to be revered. A force that could bring light to the darkest corners of the world, if only we had the imagination to wield it.

And now, adventurer, you hold the Tetra Head in your hands. You have proven yourself worthy of Pascala's challenge. But I must warn you: my brother Elron's words

are not to be trusted. He sees Pascala as a madman, the Tetra Head as a curse, and the Abyss as a place of despair. But he is wrong.

Elron's call to adventurers was not made out of concern for the kingdom. It was made out of fear. Fear of the unknown, fear of the chaos that Pascala dared to embrace. He seeks to control the Tetra Head, to lock it away and strip it of its power. But the Tetra Head was never meant to be controlled. It was meant to be understood. To be cherished. To be loved.

I leave this letter for you, adventurer, not to sway your judgment, but to open your eyes. To show you the beauty of Pascala's vision. The Tetra Head is not a tool for destruction. It is a gift. A gift to those who dare to dream, to those who see the world not as it is, but as it could be.

What you do with the Tetra Head is your choice. Will you bring it to the kingdom, where it may be shackled and stripped of its power? Or will you embrace its chaos, as Pascala did, and use it to create something beautiful? Something extraordinary?

Remember, adventurer: reality is for those who lack imagination. Fairy tales are for those who dare to dream.

Signed,

Elara of Telas

The Legend of Pascala and the Tetra Head

Reality is for people who lack imagination. Fairy tales are for those who dare to dream. This was the mantra of Pascala, the enigmatic wizard whose name echoed through the ages as both a myth and a legend. He was a man who lived in the limelight of his own creations, a master of illusionary magic who breathed life into the monsters of his stories, making them dance in the shadows of the real world. Yet, for all his brilliance, Pascala was an outcast, a solitary figure who wandered the earth in pursuit of knowledge, his only companions the ink-stained pages of his countless journals.

Pascala's greatest discovery, however, was not his illusions but a new branch of magic he called *Matika*—the power to harness the chaos and uncertainty of the world itself. It was a magic that could bend reality, not just mimic it. For forty years, from his youth to his twilight years, Pascala documented his findings in a diary, a tome that would later become the most sought-after artifact in the realm. Within its pages lay the secrets of the *Tetra Head*, a machine capable of converting the energy of the world into raw Matika, allowing even the non-magical to wield its power.

But the diary was incomplete. Pages were torn, secrets lost to time. All that remained were fragments of Pascala's life and his obsession with the Tetra Head. It was said to have been discovered in the *Trigonal Region*, a remote and mystical land where Pascala spent decades perfecting his craft. The region, now known as the *Trigonal Abyss*, was a place of chaos and unease, its very air crackling with unstable energy. Monsters of unknown origin roamed its depths, creatures that defied the natural order of the world. At the heart of the Abyss, it was said, lay the Tetra Head, its power leaking into the land, corrupting everything it touched.

The Great War of Telas brought the legend of the Tetra Head to the forefront. Armies and adventurers alike sought the machine, believing it to be the key to ultimate power. But none who entered the Trigonal Abyss ever returned. The Abyss was guarded by a fearsome creature, a three-headed hydra whose silhouette was the last thing many saw before their demise. The hydra was no ordinary beast; it was a manifestation of the chaos unleashed by the Tetra Head, a guardian born of Pascala's own magic.

Among those who sought the Tetra Head was a young scholar named Elara. Unlike the others, she was not driven by greed or ambition but by a desire to understand Pascala's legacy. Elara had spent years studying his works, piecing together the fragments of his diary. She believed that the Tetra Head was not a weapon but a tool, one that could restore balance to the world if wielded correctly.

Elara's journey to the Trigonal Abyss was fraught with peril. The air grew heavier with each step, the landscape twisting and shifting as if alive. Strange creatures lurked in the shadows, their eyes glowing with an unnatural light. But Elara pressed on, guided by the words of Pascala's diary. She knew that the key to surviving the Abyss lay in understanding its chaos, in embracing the uncertainty that Matika thrived on.

When she finally reached the heart of the Abyss, she found herself face-to-face with the three-headed hydra. Its scales shimmered with an otherworldly glow, each head hissing with a voice that seemed to echo in her mind. Elara stood her ground, clutching the diary to her chest. She did not draw a weapon or cast a spell. Instead, she spoke.

"I am not here to destroy or to conquer," she said, her voice steady. "I am here to understand. To learn from the chaos, as Pascala did."

The hydra paused, its heads tilting in unison. For a moment, the air seemed to still. Then, with a deafening roar, the creature lunged. But instead of striking Elara, it dissolved into a swirl of light and shadow, its form unraveling into the very chaos that had birthed it. Before her stood the Tetra Head, a machine of intricate design, its surface etched with symbols that pulsed with energy.

Elara approached the machine, her heart pounding. She placed her hand on its surface, and in that moment, she understood. The Tetra Head was not a source of power but a mirror, reflecting the chaos within the wielder. Pascala had not created it to control the world but to challenge it, to force those who sought its power to confront their own fears and desires.

With a deep breath, Elara activated the Tetra Head. The world around her shifted, the Abyss dissolving into a sea of light and shadow. She saw visions of Pascala, his life unfolding before her eyes—his loneliness, his brilliance, his ultimate sacrifice. She saw the truth of Matika, not as a force to be wielded but as a force to be understood.

When the visions faded, Elara found herself standing in the heart of the Trigonal Abyss, the Tetra Head silent and still. The chaos had subsided, the land returning to a state of uneasy calm. The monsters were gone, their forms dissipating into the air. The Abyss was no longer a place of fear but a place of potential, a testament to the power of imagination and the courage to dream.

Elara left the Abyss with Pascala's diary in hand, its pages now filled with her own notes and reflections. She knew that the Tetra Head would remain a legend, a story to inspire those who dared to dream. For reality, as Pascala had once said, was for those who lacked imagination. And fairy tales? They were for those who dared to dream.

And so, the legend of Pascala lived on, not as a tale of power and destruction but as a story of hope and understanding. The Tetra Head remained in the Trigonal Abyss, a silent guardian of chaos and dreams, waiting for the next soul brave enough to seek its truth.
